NR712 Certification

This Phase II ESA was conducted by personnel with the appropriate qualifications required by NR 712.02 (1), NR 712.05 and NR 712.07. AECOM provides the following certification as required by NR712.09:

I, Lanette Altenbach, hereby certify that I am a hydrogeologist as that term is defined in s. NR 712.03 (1), Wis. Adm. Code, am registered in accordance with the requirements of ch. GHSS 2, Wis. Adm. Code, and that, to the best of my knowledge, all of the information contained in this document is correct and the document was prepared in compliance with all applicable requirements in chs. NR 700 to 726, Wis. Adm. Code.

 Lanette Altenbach, P.G., CPG

Executive Summary

AECOM Technical Services, Inc. (AECOM) conducted a Phase II Environmental Site Assessment (ESA) at the former Shoe Factory, 407 North Main Street, Edgerton, Wisconsin under the Wisconsin Assessment Monies (WAM) Contractor Services program. The purpose of the Phase II ESA was to evaluate recognized environmental conditions (RECs) identified in a Phase I ESA conducted by The Sigma Group in June 2019. The subject property consists of one parcel totaling approximately 6.64 acres.

The RECs identified by The Sigma Group and review of the historic reports identified the following areas for further assessment:

- Shoe manufacturing that may have included leather treating chemicals that included perfluorinated and/or polyfluorinated alkyl substances (PFAS),
- A former leather trimmings waste dump (also a potential PFAS source area),
- Two former underground drainage sumps (noted to contain oily liquid historically),
- A former 15,000 gallon aboveground fuel oil storage tank,
- The off-site Kwik Trip gasoline station,
- Former vent pipes identified in the Phase I, and
- A former solvent drum burn area.

Soil probe borings were completed at 16 locations and 33 soil samples were collected and analyzed for volatile organic compounds (VOCs), polycyclic aromatic hydrocarbons (PAHs) and eight RCRA metals. Eight soil probe boring locations were completed as temporary wells; SP-102, SP-104, SP-107, SP-109, SP-111, SP-113, SP-114 and SP-116. One groundwater sample was collected from each location and analyzed for VOCs and PFAS. SP-104 was also analyzed for PAHs.

The soil encountered at the site included fill soil composed mostly of clay, sandy silt overlying sand, fill overlying silts and clays and sand and gravel. The fill thickness ranged from one to ten feet and tended to be greater under or adjacent to the former building footprint. The soil color was generally tan to dark brown turning to grey below the water table. The water table was encountered from approximately 1.5 to 4.5 feet below ground surface.

The Phase II ESA conclusions are:

- Fill soils were identified in 15 of the 16 locations with thicknesses of one to ten feet.
- VOCs were identified in three of the soil samples and were above groundwater pathway Residual Contaminant Levels (RCLs) in SP-105. No exceedances of the direct contact RCLs were identified.
- PAHs were detected in 23 of 33 soil samples tested but only two samples exceeded RCLs. Only one exceedance of the non-industrial direct contact RCLs was identified and the exceedance occurred in the deeper soil sample at SP-109.
- Metals were identified in each soil sample tested and detected concentrations (except chromium) were above one or more RCLs. Barium, cadmium, lead, mercury, selenium and silver were detected only above the RCL for the groundwater pathway. The detected concentration for arsenic in seven of the 33 samples was above the Background Threshold Value (BTB) for the State of Wisconsin. The arsenic concentrations exceeded the non-industrial direct contact pathway, the industrial direct contact pathway and/or the groundwater pathway RCLs in 30 of the 33 samples.
- PFAS were detected in the groundwater samples and each sample had Enforcement Standard (ES) exceedances of proposed standards for PFOA and/or PFOS. PFAS concentrations were greatest in the location of a former leather trimmings waste dump and the south end of the former building footprint. PFAS contamination may have resulted from the former shoe manufacturing activities.
- Soil contamination beneath the former above ground storage tank (AST) remains under the building footprint. This contamination could be a source for vapor intrusion.

1. Introduction

AECOM Technical Services, Inc. (AECOM) conducted a Phase II Environmental Site Assessment (ESA) at the former Shoe Factory, 407 North Main Street, Edgerton, Wisconsin under the Wisconsin Assessment Monies (WAM) Contractor Services program. The purpose of the Phase II ESA was to evaluate recognized environmental conditions (RECs) identified in a Phase I ESA conducted by The Sigma Group in June 2019.

1.1 Site Location

The subject property is located at 407 North Main Street, City of Edgerton, Rock County, Wisconsin (Figure 1); and is described as being located in part of the Northeast ¼ of the Southwest ¼ of Section 3, Township 4 North, Range 12 East. The subject property consists of one parcel totaling approximately 6.64 acres. Figure 2 depicts the site layout and Figure 3 depicts the sampling locations.

A Kwik Trip gas station is located to the north, York Road borders the property to the east, residential areas are located to the south, and North Main Street borders the property to the west. There is a drainage ditch on the east side of the property which flows into Saunders Creek to the south and eventually to the Rock River approximately 1.5 miles south. The parcel is being prepared for redevelopment and lies within a primarily residential and small commercial area. The building facilities on site were razed at the end of 2019.

2. Site Background

The subject property was historically occupied by the Nunn-Bush Shoe Factory. Records indicate the former warehouse facility was constructed in 1933 with various additions over the years. The shoe factory operated approximately 55 years until operations ceased in 1988. Between 1988 and 2011 the building was vacant for significant periods of time and marketed as a multi-tenant rental space. During this period tenants included a greenhouse structures supplier, a large format printer and a trucking company office. WIS TEK LLC purchased the property in 2011 and the site has been mostly vacant since 2011.

A Phase I ESA was completed by The Sigma Group (June 2019). The Phase I ESA identified the following recognized environmental conditions (RECs):

- Shoe manufacturing and leather treatment that may have used perfluorinated or polyfluorinated alkyl substances (PFAS).
- Vent pipes on the building with an unknown connection.
- The off-site Kwik Trip gasoline station.
- The closed (1990) Environmental Repair Program (ERP) site for environmental contamination as a historic REC (HREC).

Historic reports associated with the ERP site indicated waste leather scrap and shoe waste is/was buried at the subject property. The RECs and review of the historic reports identified the following areas for further assessment:

- Shoe manufacturing that may have included leather treating chemicals that included PFAS,
- A former leather trimmings waste dump (also a potential PFAS source area),
- Two former underground drainage sumps (noted to contain oily liquid historically),
- A former 15,000 gallon above ground fuel oil storage tank,
- Former vent pipes identified in the Phase 1, and
- A former solvent drum burn area.

The Phase I ESA report (2019) did not contain any interviews with former shoe factory workers because shoe manufacturing ceased by 1988 and the subject property has had other owners since 1988. Sanborn Fire Insurance maps were also not available for the subject property, nor were diagrams of the interior layout of the shoe manufacturing available.

Additional information was obtained from the City of Edgerton when the City had the buildings razed. In the northeast corner of the subject property building adjacent to the location of a former UST, stained soil was encountered below the building floor. A soil sample was collected by Cedar Corporation of Menomonie, WI from the stained soil and petroleum impacts were identified. Additionally, the City provided to the WDNR a sewer map dated 1937 that labeled each of the buildings with a number (No.1 through No.9) and each of the buildings were connected to another. In addition to depicting the sewer locations within the buildings, three spray booth locations were depicted within building No. 1.

2.1 Purpose and Scope of Work

The purpose of the Phase II ESA was to evaluate the RECs identified above to determine if the RECs had caused or are causing environmental impacts that present a hazard to human health or the environment.

The scope of work was developed to evaluate the RECs by sampling and analyzing soil and groundwater samples. Sixteen soil probe borings were advanced and eight of the soil probe borings were completed as temporary groundwater monitoring wells. Thirty-three soil and eight groundwater samples were collected and analyzed in March 2020.

Soil and groundwater samples were collected from within the former building footprint to evaluate impacts from former shoe manufacturing. Soils and a groundwater sample were collected from southeast part of the site to evaluate impacts from a leather trimmings waste area. Soil and groundwater samples were collected along the north part of the site to evaluate the possible impacts from former drainage sumps, a former AST, a former solvent drum burn area, unidentified vent pipes and the off-site Kwik Trip.

3. Methods of Assessment

Utility Clearance

AECOM contacted Digger's Hotline for the location of public utilities on the parcel prior to commencing work.

Soil Probe Borings

Soil probe borings were completed at 16 locations, as shown on Figure 3, designated SP-101 through SP-116. The borings were advanced to ten feet below ground surface (bgs) except for the locations completed as temporary wells which were advanced to 15 feet bgs. Soil probe borings were advanced with a hydraulic push-probe using a two-inch diameter drive rod to collect continuous soil samples inside of a polyethylene sheath inserted into the end of the drive rod. The soil samples were described in the field with respect to the soil type, grain size distribution, and color (or discoloration), odor, and moisture content. Soil samples were screened in the field with a photo-ionization detector (PID) equipped with a 10.6 electron volt (eV) lamp. The PID was calibrated in the field according to manufacturer's instructions, using 100 parts per million (ppm) isobutylene span gas and air (zero gas). Field observations from the borings were recorded on soil boring log forms (WDNR Form 4400-122) for each sample location and are included as Appendix A. Borehole abandonment forms (WDNR Form 3300-005) are also included in Appendix A.

Temporary Wells

Eight locations were completed as temporary wells: SP-102, SP-104, SP-107, SP-109, SP-111, SP-113, SP-114 and SP-116. The temporary monitoring wells were constructed using one-inch diameter PVC well screen and riser for groundwater access. A ten-foot slotted section with solid riser was placed from approximately five to 15 feet bgs so the screened interval straddled the water table. Well installation followed PFAS protocol which included decontamination of the probe between each boring with Alconox® and high-pressure steam cleaning. Temporary well construction is depicted on the boring logs in Appendix A and additional details are presented on Table 1.

The temporary monitoring wells were purged using a peristaltic pump using silicon and polyethylene tubing. The average depth to groundwater below ground surface was approximately three feet and there was rapid recharge of temporary wells during development. Approximately two gallons of water were purged from each temporary well over a duration of 30 minutes or more. Field parameters were recorded with a calibrated Aqua TROLL 600 Multiparameter Sonde and the final readings from each location are presented on Table 1.

Laboratory Analytical Methods

Soil and groundwater samples were placed in pre-cleaned, laboratory-supplied sample jars. Sample labels were completed with the sample identification number, date and time of collection, analysis to be conducted, preservative, and the sampler's initials.

Groundwater samples collected for analysis of PFAS were shipped to Vista Analytical Laboratory in El Dorado Hills, California for analysis and all other soil and groundwater samples were shipped to Pace Analytical Services in Green Bay, Wisconsin.

A chain-of-custody (COC) form was completed after sample collection and the samples were placed in a cooler and delivered to the laboratory under standard COC procedures. Thirty-three soil samples were analyzed for the following analytes:

- Volatile Organic Compounds (VOCs) by SW-846 method 8260,
- Polycyclic Aromatic Hydrocarbons (PAHs) by SW-846 8270 SIM, and
- Resource Conservation and Recovery Act (RCRA) Metals by SW-846 6010 (ICP) and 7471 for mercury.

Eight groundwater samples (and one field duplicate) were analyzed for VOCs using SW-846 method 8260 and were analyzed for the Wisconsin list of 36 PFAS analytes by isotope dilution. One groundwater sample (SP-104) was also analyzed for PAHs by SW-846 8270 SIM.

Investigative Waste Management

Soil probe borings did not generate soil cuttings as an investigation-derived waste. Decontamination water and purge water generated during the investigation were containerized in a 55-gallon drum and staged on site. The drum was approximately half full. Disposal documentation will be provided upon completion under separate cover.

4. Results

The laboratory analytical data were validated with reference to the USEPA National Functional Guidelines and the data validation memoranda are included in Appendix B. The data were considered acceptable for use and appropriate qualifications were added to the results (Table 2, Table 3 and Table 4). No soil field duplicates were collected. A groundwater field duplicate was collected for VOCs, however there were no detects and precision could not be assessed. No analytes were detected in the VOC trip blank.

Soil analytical results are compared to the generic Residual Contaminant Levels (RCLs) per WAC Ch. NR 720 and Wisconsin Background Threshold Values (BTVs) where established. Generic RCLs were those calculated by WDNR (December 2018) using the USEPA Regional Screening Level Web Calculator in accordance with WDNR Draft PUB-RR-890.

Groundwater analytical results are compared to Wisconsin Groundwater Quality standards in WAC Ch. NR 140.10. Wisconsin has two levels of groundwater quality standards. The first level, the Preventive Action Limit (PAL), is a concentration that is 10% (for carcinogenic, mutagenic or teratogenic compounds) to 20% (non-carcinogenic) of the Enforcement Standards (ES). The PAL has been established as the concentration at which notification to the WDNR is required. Remedial action is not always required if a PAL is exceeded. The ES is a health-risk based concentration and exceedances of ESs usually result in further subsurface investigation, remedial action requirements, or monitoring. No groundwater standards have been established for PFAS, however proposed ES and PAL for PFOS and PFOA have been included for comparison.

4.1 Hydrogeologic Setting

Published geologic and hydrogeologic information was reviewed to assess soil and bedrock types in the area, regional groundwater flow direction, and groundwater sources. The 7.5-minute topographic maps of the Edgerton, Wisconsin quadrangle (USGS, 2018) shows the area topography and surface water features in and around the property. The area around the property is relatively flat with an approximate elevation of 810 feet above mean sea level (MSL).

Based on observations during the field investigation, the main portion of the site is relatively flat since the building was razed. There is a topographic low point along the northern portion of the site between the former building location and the Kwik Trip parking area. Meltwater was observed flowing at the surface to the east in a path approximately 50 feet north of borings SP-103, SP-105 and SP-107. Water appeared to pool at the northeast corner of the property and along the drainage ditch that runs alongside the eastern part of the property. In addition, a small mound was observed approximately 20 feet southeast of SP-112. It appears to have been there for many years as there are trees growing out of it with six-inch diameter.

The USDA Soil Conservation Service Web Soil Survey of Rock County, Wisconsin, has mapped the area of the subject property as wet alluvial land and St. Charles silt loam with two to six percent slopes. The property is also located in a FEMA high risk flood area (designation AE).

The soil encountered at the site included fill soil composed mostly of clay, sandy silt overlying sand, fill overlying silts and clays and sand and gravel. The fill thickness ranged from one to ten feet and tended to be greater under or adjacent to the former building footprint. Coarse sand and fine gravel areas were observed at approximately six to nine feet below ground surface at the north end of the parcel and was observed at deeper levels (nine to 13 feet) toward the center of parcel. Silt with seams or partings of fine sand were common in the deeper part of the borings. The soil color was generally tan to dark brown turning to light grey below the water table. Slight and strong petroleum odor were observed at borings SP-104 and SP-105, respectively. Orange discoloration was noted in borings SP-110 and SP-111. Fibrous material and leather scrap were observed in borings SP-111 and SP-112. Leather scrap was noted in SP-112 from approximately three to six feet bgs.

The water table was encountered from approximately 1.5 to 4.5 feet bgs. Water depth was most shallow at the northeast portion of the site (SP-102 and SP-107). In areas where fresh fill from the recent building

demolition was observed, soil samples were collected just below the new fill and from deeper in the soil column. In approximately half the borings, the deeper sample was collected below the saturated zone.

4.2 Soil Samples

The soil laboratory analytical results are presented in Table 2 which includes detected VOCs, PAHs and the eight RCRA metals. The soil sample collected by Cedar Corporation in November 2019 from near the former AST is included on the table for comparison. Only one (SP-105) of the 16 borings had two VOC exceedances of the groundwater pathway RCL, by naphthalene and bromomethane. Two of the 33 samples had RCL exceedances of PAHs including a non-industrial direct contact exceedance of benzo(a)pyrene and one each of chrysene and naphthalene for the groundwater pathway RCL. The only metal with industrial and non-industrial direct contact RCL exceedances is arsenic, however only seven of 33 samples were above the BTV for the state of Wisconsin. Arsenic values were generally greater in soils deeper than four feet bgs. The groundwater pathway RCL exceedances for metals (and with concentrations above BTV) are summarized as follows:

- Arsenic was exceeded in 30 of the 33 samples (7 of 33 were above the BTV);
- Barium was exceeded in 14 of the 33 samples (2 of 33 were above the BTV);
- Cadmium was exceeded in 5 of the 33 samples (3 of 33 were above the BTV);
- Chromium was exceeded in 0 of the 33 samples (5 of 33 were above the BTV);
- Lead was exceeded in 6 of the 33 samples (4 of 33 were above the BTV);
- Mercury was exceeded in 1 of the 33 samples (No established BTV);
- Selenium was exceeded in 10 of the 33 samples (No established BTV), and
- Silver was exceeded in 4 of the 33 samples (No established BTV).

The results for the detected analytes in soil samples above RCLs are depicted in Figure 4 and Figure 5. Laboratory analytical results are included in Appendix C.

4.3 Groundwater Samples

The laboratory analytical results for the temporary wells are provided in Table 3 (VOC and PAH) and Table 4 (PFAS). Each of the temporary wells were analyzed for VOCs and PFAS. Only one VOC, chloromethane, was detected and exceeded the PAL in SP-102. SP-104 was analyzed for PAHs in groundwater and had PAL exceedances for Benzo(b)fluoranthene and chrysene. PFAS were detected in all the groundwater samples.

PFAS analytical data were evaluated with reference to Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537 (November 2018) and Wisconsin PFAS Aqueous (Non-Potable Water) and Non-Aqueous Matrices Method Expectations (December 16, 2019). The data were considered acceptable for use and appropriate qualifications were added to the results (Table 4). Two results for sample SP-116 were rejected because the surrogate recoveries were below the acceptance criteria. One field blank and three equipment blanks were collected as shown on Table B1 in Appendix B. N-Ethylperfluoroctanesulfonamidoacetic acid (NEtFOSAA), was detected in the field blank and PFOS was detected in the Geoprobe drill rod blank. Appropriate qualifications were added based on these detections. Note, only one of two sample bottles for EB- well screen was filled because the field team ran out of PFAS free water. This does not impact sample results. One field duplicate was collected for PFAS at location SP-107. Precision was acceptable except for perfluoroctane sulfonamide which was qualified by the validator due to elevated relative percent difference.

Thirteen of the 36 analytes analyzed for were detected in one or more samples (the remaining 23 analytes were not detected in any target samples). The total of all PFAS detected in each sample ranged from 97 ng/L (SP-109) to 1,810 ng/L (SP-111). The proposed ES for PFOA was exceeded in seven of the

eight samples, and the proposed PAL was exceeded in the remaining sample. The proposed ES for PFOS was exceeded in six of the eight samples, and the proposed PAL was exceeded in one sample.

4.4 Data Evaluation by REC

Shoe manufacturing that may have included leather treating chemicals that included PFAS

Sample locations SP-104 and SP-113 through SP-116 were advanced in the location of the former Nunn-Bush building footprint to evaluate potential soil and groundwater impacts from former shoe manufacturing activities. The locations of SP-113, SP-114, and SP-116 were selected to be in the vicinity of former paint booths as identified on the 1937 sewer map. SP-115 was in the vicinity of a former storage vault formerly containing 55-gallon drums of solvents, glues, hydraulic oils and other hazardous substances (Ayres, 1989). No VOCs were detected from soil samples at these locations and only a few PAH analytes were detected at low levels between the reporting limit and detection limit. Arsenic, barium, cadmium, mercury, selenium and silver were detected in one or more soil samples above the groundwater pathway RCL as depicted on Figure 5. Only one soil sample at SP-104 was slightly above the background threshold value for arsenic.

VOCs were not detected in the groundwater samples from SP-104, SP-113, SP-114, and SP-116. The proposed ES for PFOS was exceeded in all four groundwater samples in the former building footprint and the proposed ES for PFOA was exceeded in three of the four, with the remaining sample exceeding the proposed PAL.

A former leather trimmings waste dump (also a potential PFAS source area)

Sample locations SP-110 through SP-112 were used to evaluate the presence and nature of a former leather trimmings waste dump. Leather waste trimmings were observed at SP-112 and possibly at SP-111 (small amount of fibrous material). None of the tested analytes were detected at concentrations above the direct contact RCLs (either non-industrial or industrial), except for arsenic. Arsenic, barium, lead, mercury, selenium and silver were detected in some of the samples above the groundwater pathway RCL as depicted on Figure 5. VOCs were not detected in the soil samples. PAHs and other metals were detected in soil samples, but the detected concentrations did not exceed RCLs.

VOCs were not detected in the groundwater sample from SP-111. PFAS were detected at elevated concentrations from temporary well SP-111 and exceeded proposed ES for PFOA and PFOS. SP-111 had the highest total PFAS concentrations of the eight temporary wells.

Two former underground drainage sumps (noted to contain oily liquid historically)

The two former underground drainage sumps were evaluated with the collection of soil samples at SP-101 (front sump) and SP-106 (back sump). VOCs were not detected, and PAHs were detected, but the detected concentrations did not exceed RCLs. SP-101 had arsenic concentrations near the BTV and barium, selenium and silver concentrations above the groundwater pathway RCL. SP-106 had arsenic, cadmium and lead concentrations above the groundwater pathway RCL. Arsenic was below the BTV. The former sumps do not appear to have significantly impacted adjacent soils.

A former 15,000 gallon above ground fuel oil storage tank

Sample locations SP-103 through SP-106 were used to evaluate soil and groundwater impacts from a former fuel oil storage tank. VOCs were detected in soils at SP-105 and included bromomethane and naphthalene which exceeded groundwater pathway RCLs. No VOCs were detected in the water sample from SP-104. PAHs were also detected at elevated levels at SP-105, however only naphthalene exceeded the groundwater pathway RCL. Several metals exceeded groundwater pathway RCLs and arsenic, chromium and lead were detected above BTVs, though not at SP-105. Table 2 also presents analytical results for a sample from the former tank location area collected by Cedar Corporation of Menomonie, WI in November 2019. SP-105 and the November 2019 sample have similar concentrations of VOCs and PAHs, though the November 2019 sample has no RCL exceedances. Petroleum contamination of soil from the former AST is present, though does not appear to be widespread since

surrounding soil and groundwater samples did not indicate presence of petroleum compounds. PFOS exceeded the proposed ES and PFOA exceeded the proposed PAL at SP-104.

Former vent pipes identified in the Phase 1

Boring SP-103 was advanced near the location of former vent pipes identified in the Phase I by The Sigma Group (June 2019). According to the Phase I, the purpose of the vent pipes could not be identified. The two soil samples from SP-103 did not have significant soil impacts. VOCs were not detected, and PAHs were detected at low levels with no RCL exceedances. Arsenic and Barium were detected above groundwater pathway RCLs and arsenic exceeded direct contact pathway RCL but was below the BTV. The former vent pipes do not appear to have significantly impacted adjacent soils based on analytical results.

A former solvent drum burn area

A former solvent drum burn area was identified in the Ayres 1989 Phase I. Borings SP-107 and SP-108 were advanced in the reported burn area. Toluene was detected in the deeper interval at SP-108. Low level PAHs were detected. Arsenic exceeded industrial direct contact RCLs at both locations and was also above background threshold value at SP-107. In addition, barium, cadmium, lead, selenium and silver exceeded groundwater pathway RCLs. Barium, cadmium, chromium and lead were above BTVs. The groundwater sample at SP-107 analyzed for PFAS had concentrations of PFOA and PFOS that exceeded the proposed ES. VOCs were not detected in the groundwater sample from SP-107.

The off-site Kwik Trip gasoline station

The Phase I (June 2019) identified the off-site Kwik Trip to the North of the property as a REC. Two borings (SP-101 and SP-102) were advanced on the north side of the subject property during the investigation. Neither of the borings had detections of VOCs in soil or evidence of petroleum contamination such as stained soil or odor. The groundwater sample from SP-102 had a detection of chloromethane above the PAL, the PFOA result exceeded the proposed ES, and the PFOS result exceeded the proposed PAL.

A downgradient sample location

The location of SP-109 was selected to be downgradient of presumed groundwater flow (east toward the surface drainage ditch). No VOCs were detected in soils or groundwater at SP-109. PAHs were detected at low levels in surficial soils and higher in the four to five-foot range. Benzo(a)pyrene exceeded the Non-Industrial Direct Contact RCL and chrysene exceeded the generic RCL for groundwater pathway. Metals were also elevated in the deeper soil sample groundwater pathway exceedances of arsenic, barium, cadmium, and lead. Cadmium, chromium and lead were above BTVs for Wisconsin. The PFAS sample from SP-109 was the lowest of the eight temporary wells, however PFOA exceeded the proposed ES of 20 ng/L.

5. Conclusions

he Phase II ESA conclusions are:

- Fill soils were identified in 15 of the 16 locations with thicknesses of one to ten feet.
- VOCs were identified in three of the soil samples and were above groundwater pathway RCLs in SP-105. No exceedances of the direct contact RCLs were identified.
- PAHs were detected in 23 of 33 soil samples tested but only two samples exceeded RCLs. Only one exceedance of the non-industrial direct contact RCLs was identified and the exceedance occurred in the deeper soil sample at SP-109.
- Metals were identified in each soil sample tested and detected concentrations (except chromium) were above one or more RCLs. Barium, cadmium, lead, mercury, selenium and silver were detected only above the RCL for the groundwater pathway. The arsenic concentrations exceeded the non-industrial direct contact pathway, the industrial direct contact pathway and/or the groundwater pathway RCLs in 30 of the 33 samples. The detected concentration for arsenic in seven of the 33 samples was above the BTV for the State of Wisconsin.
- PFAS were detected in the groundwater samples and each sample had ES exceedances of proposed standards for PFOA and/or PFOS. PFAS concentrations were greatest in the location of a former leather trimmings waste dump and the south end of the former building footprint. PFAS contamination may have resulted from the former shoe manufacturing facility.
- Soil contamination beneath the former AST remains under the building footprint. This contamination could be a source for future vapor intrusion.

6. General Qualifications

The purpose of this environmental assessment is to investigate possible soil and/or groundwater impacts, and related liabilities, associated with past and current property uses. The extent of the investigation is limited to the area and location described in this report.

AECOM has prepared this report at the request of its client. AECOM assumes responsibility for the accuracy of the report's content, subject to what is stated elsewhere in this section. AECOM recommends the report be used only for the purpose intended by the client and AECOM, as stated in the report. AECOM disclaims responsibility for the application or interpretation of the results by anyone other than the client. Reliance on the contents of this report by anyone other than the client, without the prior expressed written consent of AECOM, is done at the sole risk of the user.

The results, conclusions, and recommendations presented in this report are based on the data obtained from a limited number of soil boring locations and at the soil sample and groundwater sample locations as indicated in this report. Variations in conditions can occur between these boring, soil sample, and groundwater sample locations. In addition, seasonal and annual fluctuations of the groundwater table, which may influence the distribution of contaminants, can occur. Actual groundwater flow rates may vary from those estimated in this report based on soil conditions.

This report has been prepared in conformance with the care and skill ordinarily exercised by reputable members of the professional engineering community practicing under similar conditions at the same time in the same or similar locality. No other warranty of any kind, expressed or implied, at common law or created by statute, is extended, made, or intended.

Notes:

ft- feet
bgs- below ground surface
TOC- top of casing
 $\mu\text{S}/\text{cm}$ - microsiemens per centimeter
DO- Dissolved Oxygen
mg/L- milligrams per liter or parts per million
ORP- Oxidation Reduction Potential
mV- millivolts
°C- degrees Celsius
NTU- Nephelometric Turbidity Units

Temporary Well Information:

Installed- 3/5/2020
Abandoned- 3/6/2020
Screen- 10ft Johnsons Screens 0.1 slot factory cut
material- PVC
Filter Pack- coarse sand placed around screen
Surface seal- 1-2 ft of bentonite at surface

Appendix B Laboratory Data Validation Memos

Memorandum

Date: April 6, 2020

To: Lanette Altenbach, Project Manager (PG)

From: Lisa Smith, Environmental Chemist (CEAC)

Subject: PFAS Data Validation for Groundwater Samples
Phase II Environmental Site Assessment
Shoe Factory Site, Edgerton, Wisconsin

SUMMARY

Data validation was performed on the analytical results of the groundwater samples collected at the Shoe Factory Site in Edgerton, Wisconsin on March 5 and 6, 2020 and submitted to Vista Analytical Laboratory (Vista) El Dorado Hills, CA for analysis. Vista processed the samples and reported the results under Work Order (WO) 2000512.

The analytical data were evaluated with reference to the Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537 (November 2018) and Wisconsin PFAS Aqueous (Non-Potable Water) and Non-Aqueous Matrices Method Expectations (December 16, 2019). Laboratory control limits and/or method criteria were used as appropriate as the basis for validation actions.

Based on the results of the validation, the data are valid as reported and may be used for decision making purpose. Some data required qualifications as discussed below and summarized in Table 1 and two results for sample SP-116 were rejected (R). Data validation qualifiers override any assigned laboratory data flags. Results reported below the reporting limit (RL) were qualified as estimated (J) by the laboratory; qualifications of these results were accepted by the validator, but are not shown in Table 1.

METHODS

The samples were analyzed by the methods listed below.

Analyte Group	Method	Number of Samples
PFAS	EPA 537 (modified)	8 Groundwater Samples, 1 Field Duplicate, 1 Field Blanks and 3 Equipment Blanks

REVIEW ELEMENTS

A limited data validation was performed on the samples. Quality control (QC) parameters listed below were reviewed, if applicable to the methodology.

Limited Validation

Holding Time
Method Blanks
Field and Equipment Blanks
Isotope Dilution (Labeled Analog) Results
Laboratory Control Samples
Field Duplicates
Quantitation Limits

DISCUSSION

Sample Receipt

Samples were received at the laboratory intact, within the temperature criteria of < 6 °C, and in good condition. The laboratory indicated that one of the two bottles received for sample EB- well screen was empty. The laboratory was able to analyze the remaining intact bottle and report results for this equipment blank. In addition, the second page of the chain of custody did not list the number of bottles, bottle type, and sample matrix. The AECOM project manager indicated the matrix for these samples as aqueous.

Holding Times

Samples were extracted within the 28-day holding time, and analyzed within 30 days of extraction.

Method Blanks

Laboratory blanks are analyzed to assess contamination from laboratory procedures. Method blanks were analyzed at the correct frequency. Analytes were not detected in the method blank.

Equipment and Field Blanks

One field blank and three equipment blanks were collected to assess contamination from field procedures. Analytes were not detected in the field and equipment blanks, with the exceptions listed below.

Blank ID	Compound	Units	Blank Concentration	Results Qualified
Field Blank	NEtFOSAA	ng/L	1.55 J	The detect for sample SP-107 was above the RL, but within 5 times the blank concentration and qualified as estimated biased high (J+).
EB- DRILL ROD	Perfluorooctanesulfonic acid (PFOS)	ng/L	2.76 J	The detect for sample SP-102 was above the RL, but within 5 times the blank concentration and qualified as estimated biased high (J+).

Isotope Dilution (Labeled Analog) Results

Labeled analogs are spiked into all field samples, field QC samples, and method QC samples and are used during quantitation and to evaluate accuracy. Recoveries (%Rs) were within acceptable limits, with the exception of samples listed below. Results qualified are also listed below. Two results for sample SP-116 were rejected (R) due to severe inabilities to recover the labeled analog.

Sample ID	Labeled Analog	% Recovery	Recovery Limits	Qualifications
SP-116	d3-MeFOSA	9.6	10-150	Rejected (R)
	d5-EtFOSA	9.1	10-150	Rejected (R)

Laboratory Control Samples (LCSs)

LCSs are analyzed to monitor the accuracy of the analytical method independent of matrix effects. LCS recoveries were within the 50% to 150% limits for low range LCSs.

Quantitation

Results associated with ion transition ratios that were outside of acceptance criteria were qualified as estimated (J).

Field Duplicates

Field duplicates are collected to assess the overall precision of field sampling and laboratory analysis. One field duplicate sample was collected, and field precision is summarized below. RPDs for the field duplicate pair were within the 30 percent limit for water sample, or were within 50% for results within ± 2 times the reporting limit (RL), with the exception of perfluoroctane sulfonamide (PFOSA) which had an RPD of 50.3%. PFOSA results for sample SP-107 and SP-107 DUP were qualified as estimated (J).

Sample & Compound(s)	Units	RL (max)	Sample Concentration	Field Duplicate Concentration	RPD (%)
SP-107/SP-107 DUP:					
Perfluorobutanesulfonic acid	ng/L	4.42	4.24 J	4.71	10.5
Perfluorobutanoic acid	ng/L	4.42	19	21.4	11.9
Perfluoroheptanesulfonic acid	ng/L	4.42	3.23 J	2.76 J	15.7
Perfluoroheptanoic acid	ng/L	4.42	3.47 J	4.83	32.8
Perfluorohexanesulfonic acid	ng/L	4.42	8.41	9.04	7.2
Perfluorohexanoic acid	ng/L	4.42	4.51	5.11	12.5
Perfluorononanoic acid	ng/L	4.42	1.19 J	1.54 J	25.6
Perfluoroctane sulfonamide	ng/L	4.42	6.34	10.6	50.3
Perfluoroctanesulfonic acid	ng/L	4.42	151	162	7
Perfluoroctanoic acid	ng/L	4.42	31.3	32.9	5
Perfluoropentanoic acid	ng/L	4.42	4.94	5.69	14.1

Results qualified nondetect due to contamination are not included in the table.

Validation Flags

SP-107 SP-107 DUP	PFOSA	ng/L	J	fd

(1): Data Validation Qualifiers:

J: The analyte was positively identified. The associated numerical value is estimated (+/- indicates the direction of bias).

R: The data are unusable. The sample results are rejected due to serious deficiencies in meeting QC criteria. The analyte may or may not be present in the sample.

(2): Reason Codes:

- eb Equipment blank
- fb Field Blank
- fd Field Duplicate
- id Isotope dilution
- q Quantitation (ion transition ratios)

Memorandum

Date: March 19, 2020

To: Lanette Altenbach, Project Manager (PG)

From: Lisa Smith, Environmental Chemist (CEAC)

Subject: Data Validation - Analytical Results for Soil and Groundwater Samples
Phase II Environmental Site Assessment
Shoe Factory Site, Edgerton, Wisconsin

SUMMARY

Data validation was performed on the analytical results of the soil and groundwater samples collected at the Shoe Factory Site in Edgerton, Wisconsin on March 5 and 6, 2020 and submitted to Pace Analytical, Green Bay for analysis. Pace processed the samples and reported the results under sample delivery group (SDG) 40204467.

The analytical data were evaluated with reference to the United States Environmental Protection Agency (USEPA) National Functional Guidelines for Superfund Organic Methods Data Review (January 2017), and National Functional Guidelines for Inorganic Superfund Methods Data Review (January 2017). The National Functional Guidelines were modified to accommodate the non-CLP methodology. Laboratory control limits and/or method criteria were used as appropriate as the basis for validation actions.

Based on the results of the validation, the data are valid as reported and may be used for decision making purpose. Some data required qualifications as discussed below and summarized in Table 1. Data validation qualifiers override any assigned laboratory data flags. Results reported below the limit of quantitation (LOQ) were qualified as estimated (J) by the laboratory; qualifications of these results were accepted by the validator, but are not shown in Table 1.

METHODS

The samples were analyzed by the methods listed below.

Matrix	Analyte Group	Method	Number of Samples
Soil	VOCs	SW-846 8260	33 soil samples
	PAHs	SW-846 8270 SIM	1 Trip Blank (VOCs only)
	RCRA Metals	SW-846 6010/7471	
Groundwater	VOCs	SW-846 8260	8 samples, 1 field duplicate, and 1 trip blank
	PAHs	SW-846 8270 SIM	1 sample

REVIEW ELEMENTS

A limited data validation was performed on the samples. Quality control (QC) parameters listed below were reviewed, if applicable to the methodology.

Limited Validation

Holding Time
Method Blanks
Trip Blanks
Surrogate Recoveries
Laboratory Control Samples
Matrix Spikes/Matrix Spike Duplicates
Field Duplicates
Quantitation Limits

DISCUSSION

Sample Receipt

Samples were received at the laboratory intact, properly preserved and in good condition. The samples were received on ice.

Holding Times

Samples were extracted and analyzed within holding times.

Method Blanks

Laboratory blanks are analyzed to assess contamination from laboratory procedures. Method blanks were analyzed at the correct frequency. Analytes were not detected in the associated method blanks, with the exception of mercury. Mercury was detected in the method blank for batch 349788 at a concentration of 0.017 J mg/kg. Associated detects that were less than the LOQ were qualified as nondetect (U), while associated detects that were above the LOQ and within five times the blank concentration were qualified as estimated biased high (J+).

Trip Blanks

Trip blanks are used to assess contamination from sample shipping. Two trip blanks were associated with the sample shipments. Analytes were not detected in the trip blanks.

Surrogate Recoveries

Surrogates are spiked into all field samples, field QC samples, and method QC samples and are used to evaluate accuracy. The surrogates are organic compounds similar to the target compounds in chemical composition and behavior in the analytical process, but are not usually found in environmental samples. Surrogates recoveries were within the laboratory specified QC limits, with the exception of the 2-fluorobiphenyl surrogate for sample SP-103/ 1.5-2.5. The laboratory reported a 2-fluorobiphenyl surrogate recovery of 94%, while the acceptable recovery range is 42% to 92%. Associated PAH detects were qualified as estimated biased high (J+). Surrogates that were diluted out were not evaluated.

Laboratory Control Samples (LCSs)

LCSs are analyzed to monitor the accuracy of the analytical method independent of matrix effects. LCS recoveries were within the laboratory specified QC limits.

Matrix Spike/Matrix Spike Duplicates (MS/MSDs)

MS/MSDs are analyzed to determine the effects of sample matrix on the measurement methodology. MS/MSDs were reported from batch analysis. MS/MSD results were reported for soil sample SP-102/1-2 for ICP metals; sample SP-104/ 13-14 and SP-105/ 4-5 for VOCs; and sample SP-113/ 3-4 for PAHs.

The table below summarizes MS/MSD exceedances and qualifications. Non-project MS/MSDs were not applicable and were not evaluated.

Spiked Sample	Compound	MS/MSD % Recovery	Recovery Limits	Results Qualified
SP-102/1-2_0320	Barium	143/118	75-125	The barium result for sample SP-102/1-2_0320 was qualified as estimated biased high (J+).

Quantitation

Dilutions were required during analysis of the soil samples due to high sample concentrations. The dilutions were necessary to bring the sample concentrations within the calibration range of the instrument. In addition, some of the soil metals samples were diluted due to matrix interference.

Non-detect VOC soil results were reported on a wet weight basis.

Field Duplicates

Field duplicates are collected to assess the overall precision of field sampling and laboratory analysis. One groundwater field duplicate sample was collected. Analytes were not detected in the field duplicate or parent sample, and precision could not be assessed.

Validation Flags

Table 1 – Data Validation Summary of Qualified Data

Sample ID	Analyte	Units	Validation Qualifier ¹	Reason Code ²
Soil Samples:				
SP-105/ 4-5_0320	Mercury	mg/kg	U	mb
SP-105/ 9-10_0320				
SP-110/ 1-2_0320				
SP-111/ 1-2_0320				
SP-114/ 4-5_0320				
SP-106/ 1-2_0320	Mercury	mg/kg	J+	mb
SP-108/ 1-2_0320				
SP-110/ 8-9_0320				
SP-111/ 7-8_0320				
SP-112/ 2-3_0320				
SP-113/ 5-6_0320

RE: Project: 60617051 SHOE FACTORY SITE
Pace Project No.: 40204467

Dear Lanette Altenbach:

Enclosed are the analytical results for sample(s) received by the laboratory on March 10, 2020. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Christopher Hyska

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-101/ 1-2 Lab ID: 40204467004 Collected: 03/05/20 11:30 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-101/ 4-5 Lab ID: 40204467005 Collected: 03/05/20 11:35 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-103/ 1.5-2.5 Lab ID: 40204467006 Collected: 03/05/20 11:40 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-103/ 4-5 Lab ID: 40204467007 Collected: 03/05/20 11:45 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-115/ 4-5 Lab ID: 40204467008 Collected: 03/05/20 12:00 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-107/ 4-5 Lab ID: 40204467014 Collected: 03/05/20 12:50 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-109/ 1-2 Lab ID: 40204467015 Collected: 03/05/20 13:05 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-109/ 4-5 Lab ID: 40204467016 Collected: 03/05/20 13:10 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

REPORT OF LABORATORY ANALYSIS

This report shall not be reproduced, except in full,
without the written consent of Pace Analytical Services, LLC.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-116/ 1-2 Lab ID: 40204467017 Collected: 03/05/20 13:15 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-116/ 4-5 Lab ID: 40204467018 Collected: 03/05/20 13:30 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-111/ 1-2 Lab ID: 40204467023 Collected: 03/05/20 15:00 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-111/ 7-8 Lab ID: 40204467024 Collected: 03/05/20 15:10 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-112/ 2-3 Lab ID: 40204467025 Collected: 03/05/20 15:15 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-112/ 4-5 Lab ID: 40204467026 Collected: 03/05/20 15:20 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-110/ 1-2 Lab ID: 40204467027 Collected: 03/05/20 15:30 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-108/ 4-5 Lab ID: 40204467032 Collected: 03/05/20 16:05 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

ANALYTICAL RESULTS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

Sample: SP-105/ 4-5 Lab ID: 40204467033 Collected: 03/05/20 16:15 Received: 03/10/20 09:15 Matrix: Solid

Results reported on a "dry weight" basis and are adjusted for percent moisture, sample size and any dilutions.

QUALIFIERS

Project: 60617051 SHOE FACTORY SITE

Pace Project No.: 40204467

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above LOD.

J - Estimated concentration at or above the LOD and below the LOQ.

LOD - Limit of Detection adjusted for dilution factor, percent moisture, initial weight and final volume.

LOQ - Limit of Quantitation adjusted for dilution factor, percent moisture, initial weight and final volume.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected at or above the adjusted LOD.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

S3 Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated sample.

S4 Surrogate recovery not evaluated against control limits due to sample dilution.

W Non-detect results are reported on a wet weight basis.

Vista Work Order No. 2000512

Ms. Lanette Altenbach
AECOM
1555 N. River Center Drive
Milwaukee, WI 53212

Dear Ms. Altenbach,

Enclosed are the results for the sample set received at Vista Analytical Laboratory on March 10, 2020 under your Project Name 'Shoe Factory 60617051'.

Vista Analytical Laboratory is committed to serving you effectively. If you require additional information, please contact me at 916-673-1520 or by email at mmaier@vista-analytical.com.

Thank you for choosing Vista as part of your analytical support team.

Sincerely,

Martha Maier
Laboratory Director

Vista Analytical Laboratory certifies that the report herein meets all the requirements set forth by NELAP for those applicable test methods. Results relate only to the samples as received by the laboratory. This report should not be reproduced except in full without the written approval of Vista.

Vista Work Order No. 2000512**Case Narrative****Sample Condition on Receipt:**

Thirteen aqueous samples were received in good condition and within the method temperature requirements. The samples were received and stored securely in accordance with Vista standard operating procedures and EPA methodology. The matrices for samples "SP-107 Dup", "SP-104" and "SP-102" were not listed on the CoC.

Analytical Notes:**PFAS Isotope Dilution Method**

The following samples contained particulate and were centrifuged prior to extraction:

<u>Laboratory ID</u>	<u>Sample Name</u>
2000512-05	SP-116
2000512-06	SP-111
2000512-07	SP-109
2000512-08	SP-114
2000512-09	SP-113
2000512-12	SP-104
2000512-13	SP-102

The samples were extracted and analyzed for a selected list of PFAS using Vista's PFAS Isotope Dilution Method. The results for PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Results for all other analytes include the linear isomers only. The "RL" column on the datasheets corresponds to the "MRL" required by the State of Wisconsin.

Holding Times

The samples were extracted and analyzed within the method hold times.

Quality Control

The Initial Calibration and Continuing Calibration Verifications met the acceptance criteria.

A Method Blank and Ongoing Precision and Recovery (OPR) sample were extracted and analyzed with the preparation batch. No analytes were detected in the Method Blank above the Reporting Limit. The OPR recoveries were within the method acceptance criteria.

The internal standard recoveries outside the acceptance criteria are listed in the table below.

QC Anomalies

LabNumber	SampleName	Analysis	Analyte	Flag	%Rec
2000512-05	SP-116	PFAS Isotope Dilution Method	d3-MeFOSA	H	9.60
2000512-05	SP-116	PFAS Isotope Dilution Method	d5-EtFOSA	H	9.10

H = Recovery was outside laboratory acceptance criteria.

MDL - Method Detection Limit

RL - Reporting limit

Results reported to MDL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

MDL - Method Detection Limit

RL - Reporting limit

Results reported to MDL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

Sample ID: SP-111

MDL - Method Detection Limit

RL - Reporting limit

Results reported to MDL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

MDL - Method Detection Limit

RL - Reporting limit

Results reported to MDL.

When reported, PFHxS, PFOA, PFOS, MeFOSAA and EtFOSAA include both linear and branched isomers. Only the linear isomer is reported for all other analytes.

DATA QUALIFIERS & ABBREVIATIONS

B	This compound was also detected in the method blank
Conc.	Concentration
CRS	Cleanup Recovery Standard
D	Dilution
DL	Detection limit
E	The associated compound concentration exceeded the calibration range of the instrument
H	Recovery and/or RPD was outside laboratory acceptance limits
I	Chemical Interference
IS	Internal Standard
J	The amount detected is below the Reporting Limit/LOQ
LOD	Limit of Detection
LOQ	Limit of Quantitation
M	Estimated Maximum Possible Concentration (CA Region 2 projects only)
NA	Not applicable
ND	Not Detected
OPR	Ongoing Precision and Recovery sample
P	The reported concentration may include contribution from chlorinated diphenyl ether(s).
Q	The ion transition ratio is outside of the acceptance criteria.
RL	Reporting Limit
TEQ	Toxic Equivalency
U	Not Detected (specific projects only)
*	See Cover Letter

Unless otherwise noted, solid sample results are reported in dry weight. Tissue samples are reported in wet weight.

IS: 20A0861, 10mL V ₃	SPE Chem: strata ^{XL AN 100mm 20um/g/lbm}	Notes: * LW 03/30/2020
IS SUP: 20C1202, 20mL V ₁₀	SPE Lot#: 518-0668605	
NS: 20C1801, 10mL	ENVI-Carb Lot#: N/A	
NS SUP: N/A	Ele SOLV: MeOH/0.5%NH4OH in MeOH	
RS: 20A0804, 10mL V ₃	Final Volume(s) 1 mL	

Comments: Assume 1 g = 1 mL

Cen = Centrifuged

Rec = Reconcile final vial transfer

1 = Sample centrifuged twice

2 = Sample deeply colored after centrifuge

3 = Cartridge sorbent discolored after SPE

4 = Sample clogged cartridge, additional cartridge(s) used

5 = Sample recombined at final volume

6 = Sample took longer to SPE, required stronger vacuum

7 = Required Nitrogen line to finish SPE

8 = Required Nitrogen line to finish elution

9 = Sample arrived with low volume

10 = Trizma added to QC (5g/L)

Batch: B0C0242

Matrix: Aqueous
